5 Ways to Build Your Professional Portfolio

- 1. Set yourself apart.** Between schoolwork and clinical training, not to mention a personal life, it's hard to find time for extracurricular activities. But building your résumé is an important tool for winning over future employers, and getting involved helps set you apart from the rest.
- 2. Boost your skill set.** Many schools offer learning tools such as leadership academies, time management seminars or peer mentoring. Boosting your skill set is a sure-fire way to make you indispensable to an organization.
- 3. Join a student group.** Feeling connected to others entering the same profession not only helps build a network of friends, but can ease your struggle to balance classroom training and clinical learning.
- 4. Become a leader.** Sometimes just being involved isn't enough. To truly stand out and gain valuable experience, take on a leadership role. Doing more than what's expected shows potential employers you know how to take a hands-on approach to your job.
- 5. Go beyond school groups.** Once you've established a presence on campus, explore options outside of school. National professional organizations often have local or state chapters that welcome young, eager professionals. It's never too early to start.
